THE USE OF AUDIO VISUAL AIDS TO IMPROVE STUDENTS’ LISTENING COMPREHENSIONS (Quasi Experimental Research of the Eleventh Grade Students of MAN PK Surakarta in the Academic Year of 2017/2018)

Keywords: Audio, Audio Visual, Listening Comprehensions

The objectives of this research were to find out the profile of the students before and after the use of audio visual aids and to find out the effectiveness of the use of audio visual aids to improve the students’ listening comprehension. This research applied quantitative research approach. The design of this research was quasi experimental with pre-test & post-test control group design. The subject of this research were the students of MAN PK Surakarta in the Academic Year of 2017/2018. The data were collected from pre-test and post-test that distributed to the students. Then, the data were analyzed using t-test formula. The results showed that there was difference between experimental group and control group. Before the research conducted, the Ma was similar with Mb, while after the research conducted the Ma > Mb. The data calculation also showed that there was significant effect before and after the research conducted. It was proven by to < tt in the pre-test, while in the post test to > tt. It can be concluded that audio visual aids had positive effect toward the students’ listening comprehension of the eleventh students of MAN PK Surakarta.
